## RESIDENTIAL.

Houses and apartments represent the center of life and must therefore also have a suitable lighting concept. This must simultaneously meet a variety of different requirements and always be adapted to the individual needs of the occupants. Kitchen or bathroom, living room or bedroom, some rooms serve primarily for relaxation and recreation and should therefore be designed according to personal preferences; other rooms, however, also have a large functional aspect to fulfill and therefore require a more complex lighting concept that must take into account not only the creation of atmosphere but also a variety of technical challenges.

Since there are also many different rooms with different uses in a living area, each room must be taken into account with its own characteristics but at the same time also harmoniously fit into the overall concept. The lighting concept does not always refer to a new building, also in case of renovation or conversion it makes sense to work out an individually coordinated lighting concept. A contemporary lighting for apartments or single-family houses takes into account not only an energy-saving and as functional as possible use, but also the creation of an atmosphere in which people feel comfortable and like to stay.

## CONTROL MAKES THE DIFFERENCE

Different light solutions can change the shape, the feeling and the perception of each room. The atmosphere is personal, and the correct mood depends on people living and using the space.

Smart home control is the solution today to create even more flexible rooms, where the atmosphere can be personalised to the last details, adapted and managed exactly as required.

Our light fittings are compatible with all the protocols for electronic control, and now our capability goes even further, with a revolutionary solution for the smart home: full compatibility with Matter protocol.

## THE FUTURE IS NOW! PROLICHT WORKS WITH MATTER

Imagine a world where all your devices seamlessly work together: the idea is simple. The impact is powerful.

PROLICHT is offering as one of the first companies in the lighting industry, matter control for more than 1,000 light fittings in over 50,000 possible configurations. Seamless integration in new electrical installations, retrofitting in any existing condition.

## LIGHT COLORS CREATING IMPRESSIONS

The color of light, or the color temperature, is crucial for the well-being in rooms. For the living area, reddish, warm white light is increasingly used, as this creates an inviting, ambient atmosphere, perceived as cozy and comfortable.

For bathrooms or even kitchens, neutral white lighting is a better choice to emphasize contrasts and at the same time create a homely atmosphere.

Conscious use of different light colors adapted to the specific use of a room, contributes significantly to the comfort in the room, while using it optimally.

## TUNABLE WHITE

We spend most of our time in buildings with artificial light. A lighting solution which follows the nature, enables a biological lighting effect on people and increases well-being and motivation.

For this, Tunable White is the perfect choice for an installation that is able to adapt to human needs, mimicking the evolution of natural light during the day or defining with specific settings the most comfortable scenario that each user can set.

## WHY ACOUSTIC MATTERS

The well-being of a room is one of the most important prerequisites for relaxation, social gathering or concentrated activities. Two essential aspects are lighting that is tailored to individual needs and excellent acoustics. Studies show that a quiet environment, has a significant impact on increasing productivity and well-being.

Too much noise can even have a negative impact on health, leading to stress and increased levels of heart rate and blood pressure. Acoustic lighting significantly improves the mood in a room, without compromising the design. While the right light intensity or color temperature play a role in choosing the right luminaires, in acoustics there are two key principles to keep in mind: absorption and diffusion.

## DIFFUSION

Sound diffusion refers to the degree of "dispersion" of sound waves in a room. Those sound waves that are not absorbed by surfaces travel in different directions through the room, creating unpleasant noise. The aim is to achieve the lowest possible diffusion values. To prevent this, acoustic ceiling sails with integrated lighting can be placed directly above noise sources, such as dining or meeting tables.

## ABSORPTION

Sound behaves like other energy sources and "travels" through space. When a sound wave hits a surface in a room, such as a wall, some of the sound is reflected and returned to the room and some is absorbed, depending on the nature of the surface. The higher the absorption coefficient of a material, the more it helps to optimize the acoustics in the room. For example, the 24 mm AR-CHISONIC® material used in our acoustic lighting fittings has an absorption coefficient of 75%.

## THE FURNISHING CONCEPT

Colors complete the room's atmosphere. They generate emotions, working their effects on the entire human organism, on the psyche, memory and orientation. The individual colors chosen not only affect the appearance of a project, but also its general mood. The emotional power of color fundamentally helps to shape a building. Color gives a room a visual and emotional face, and the right choice of color is an essential part of the design process. The slightest color accent can have a huge impact.

PROLICHT gives you the possibility to choose from 25 unique shades for the design of all its luminaires. On many products, it is even possible to have different components in different colors, enabling endless color combinations. From timeless classics, through natural organics to fresh, vibrant colors or rich and opulent shades, the PROLICHT color palette offers an outstanding range of colors.

If the light is not right, even a nobly designed living room equipped with high-quality materials and furniture does not come into its own. A good lighting design with properly used lighting tools ensures brilliance, highlights value and gives rooms the right atmosphere.

Paul Petter | Architect

## PROLICHT THE TYROLEAN HIGH TECH MANUFACTURE

We regard ourselves as a high-tech manufacturer and our employees see themselves as bespoke craftsmen, creating a truly personal product for everyone. To enable luminaires to make a significant contribution to a room design, the option of unlimited configurability is a must. PROLICHT offers this on all its luminaires.

Whether it's a single item or an extensive, complex project, we treat each order with the same care and enthusiasm, always bearing in mind that perfect execution and maximum quality are key. Thanks to modern and efficient manufacturing processes, we produce almost every luminaire to order, exactly as the future owner wants it – stock goods are a foreign concept at PROLICHT.

Every luminaire is a unique custom piece with heart and soul in its design and implementation.

Custom lighting is an expression of personality. That's why it's especially important to us to make each product exactly how it is needed. Each object, each room and each project is unique, and that's something we want to emphasise with our luminaires.

If you promise your demanding clients bespoke, high-tech, quality products, you can't have them made just anywhere. We make them where our heart is and where the best qualified technicians, engineers and designers find themselves at home. In the heart of Tyrol, we create a masterpiece from a simple piece of aluminium.

Top-quality unique designs are produced on site from raw materials. The heart of the PROLICHT philosophy is to bring all stages of production together in our own factory. That enables us to manage quality, production speed and working conditions ourselves.

# IN THE BEGINNING WAS LIGHT PLANNING...

With our enthusiasm for the perfect light staging, we at PROLICHT make the difference. It is important to us to know and understand our partners and their wishes exactly. Long-term relationships and communication at eye level make working with PROLICHT not only pleasant, but also effective. We give each assignment enough space and time for dialog and are happy to accompany a project along the entire process. From

project analysis, to idea generation and needs assessment, object inspection, support to lighting design, we are there to support and are always ready to offer solutions away from any standard. It is our ambition not to deliver just any lighting, because every project is unique and should be encouraged and supported in its uniqueness.

In residential, the right light creates a special atmosphere. Coming home is a feeling that must be supported by the lighting and interior design to reduce stress and create a sense of comfort.

Each room should be considered with a lighting design appropriate to its function. For example, luminaires in damp rooms must meet different challenges in terms of lighting technology and construction than luminaires that are intended to create a suitable atmosphere in relaxation rooms. The planning of a lighting concept for living spaces thus results in a feel-good atmosphere that, depending on the place of use, covers all requirements and sets the rooms individually in scene.

## ENTRANCE, BALCONY & TERRACE

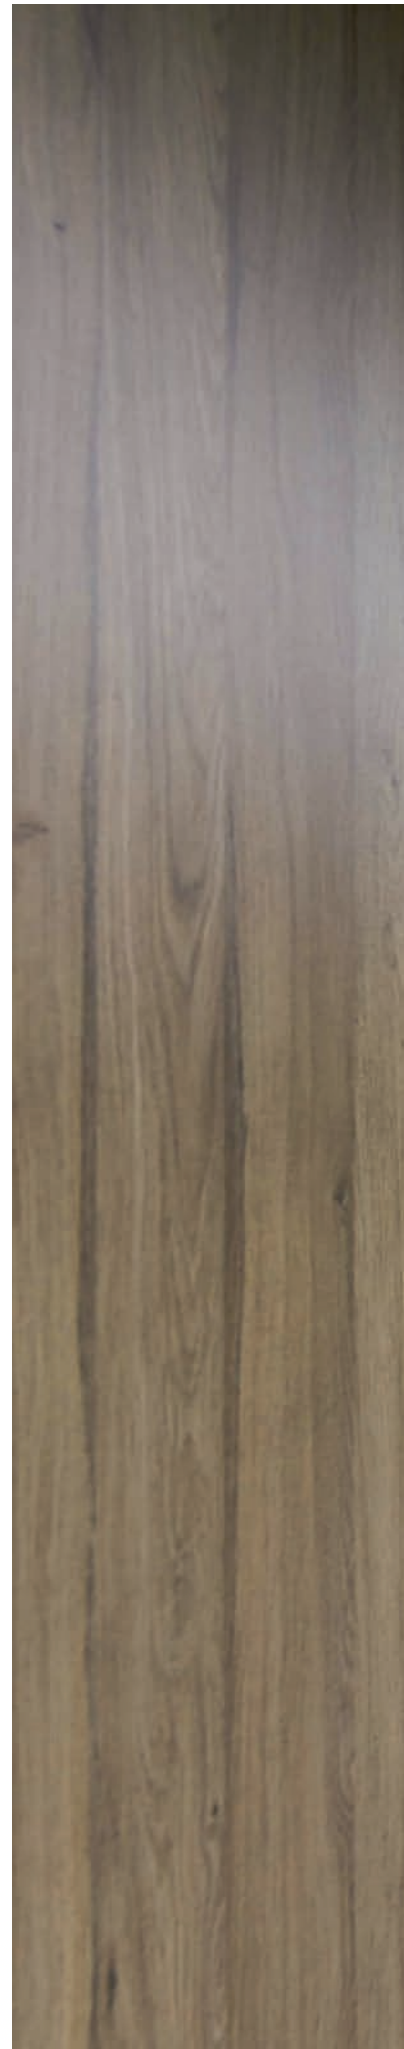

The design of the MAGIQ with MICRO-DOT also allows the use in areas for IP 44 requirements and is therefore also suitable for protected outdoor areas.

## LIGHT FOR ENTRANCE, BALCONY & TERRACE

The right light is not only essential in the house, also in the outdoor area it requires some considerations in terms of the lighting concept. In addition to sufficient lighting for the entrance to the house, which primarily has a safety aspect, a representative, inviting atmosphere should also be created in front of the house. Lighting for the outdoor area should provide sufficient basic brightness on balconies and terraces and take into account seating areas and their requirements.

The design of the MAGIQ with MICRO-DOT also allows the use in areas for IP44 requirements and is therefore also suitable for protected outdoor areas.

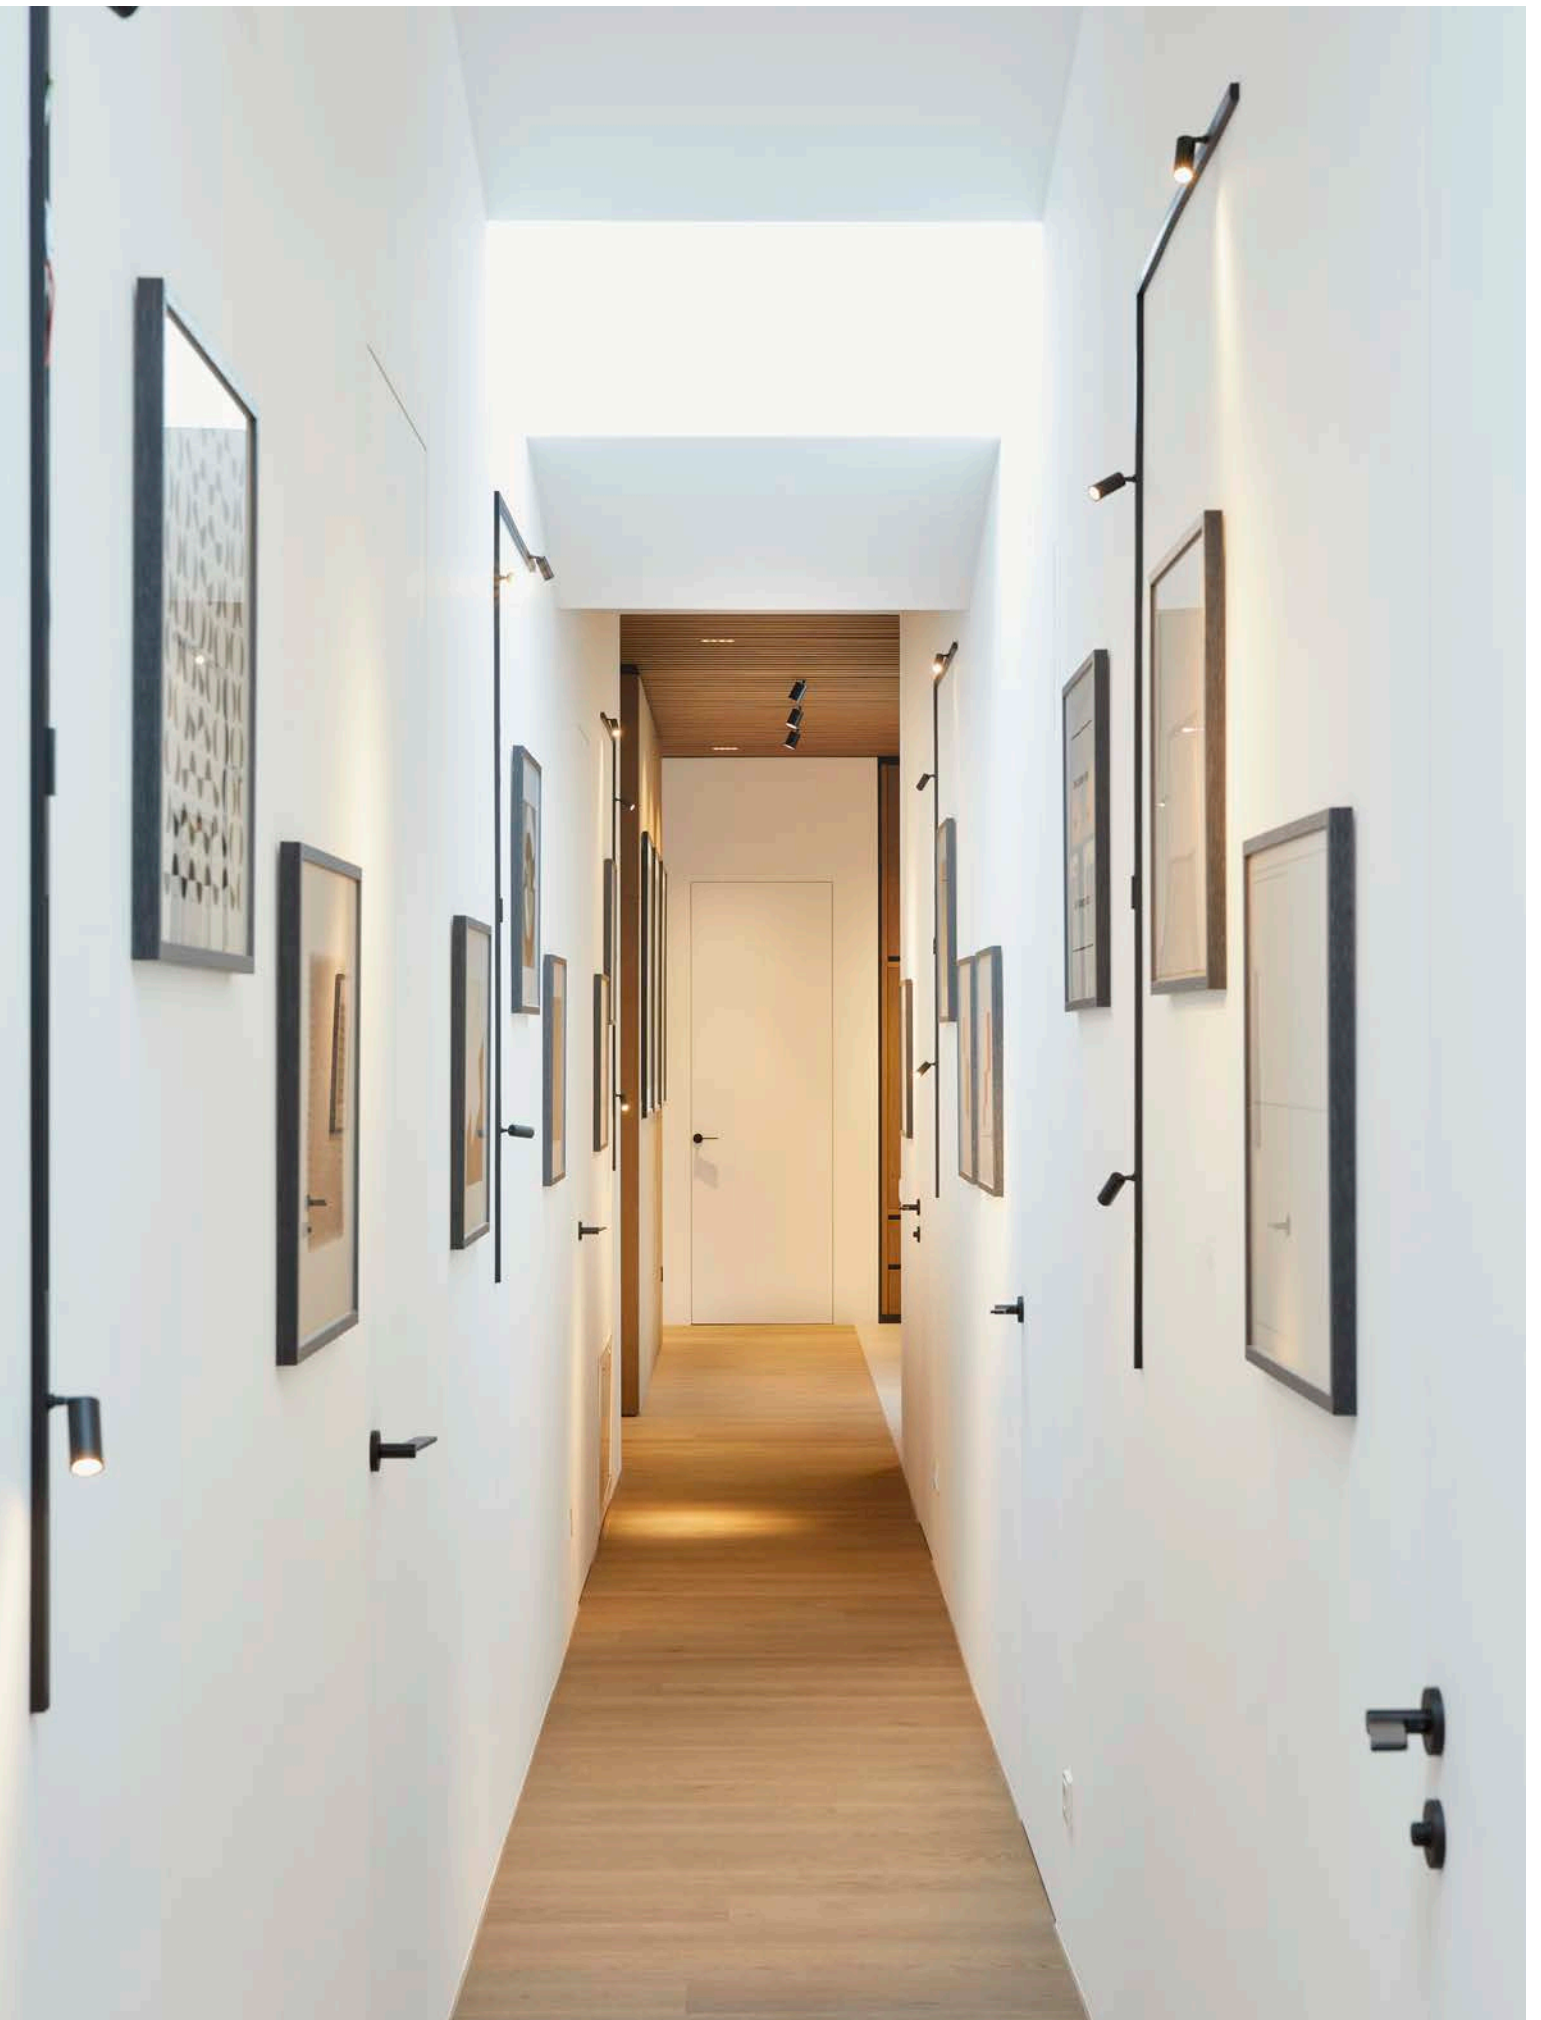

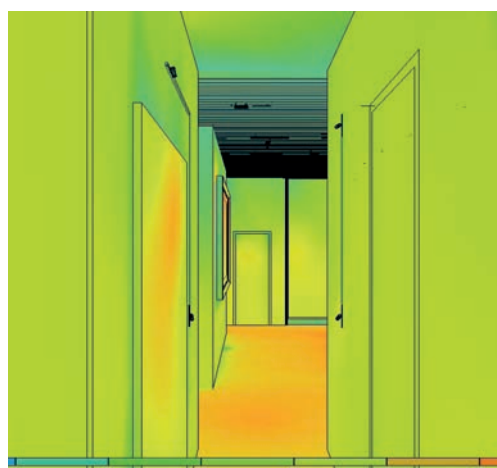

## FIRST IMPRESSION COUNTS

The corridor and the staircase are the first point of contact with the interior of an apartment or house. So that the first impression is inviting and pleasant, your individual lighting concept is already required here. A pleasant general lighting combined with accent lighting, offers an atmosphere in which you like to arrive and at the same time supports the orientation and functionality of this area.

DINING ROOM

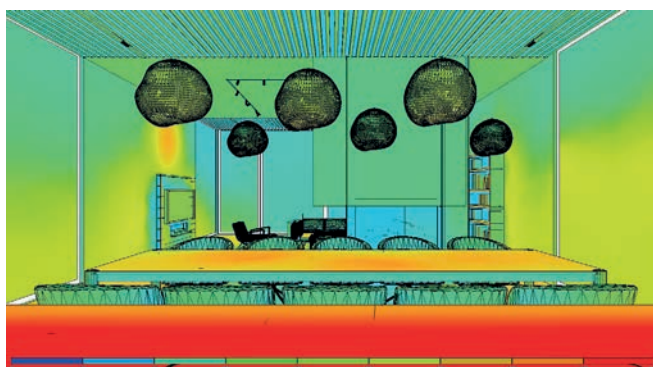

# TOM DIXON × PROLICHT

In order to create products that not only fulfill every technical demand modern lighting design poses, we try to think outside of the box and cooperate with the best designers and thinkers from all over the world. Our sophisticated technology longs for the right frame to be employed and this can only be reached by working together with designers and lighting

specialists to produce holistic solutions that help interior designers and architects to reach their vision. For this goal, we are expanding our range with selected Tom Dixon products, which are available as inserts for some of our systems. The recent inclusion of the iconic Tom Dixon luminaires in our lighting systems is another step towards a professional fusion of our projects.

MELT is a beautifully distorted small pendant in an modern finish like copper, gold, smoke and chrome. Featuring an integrated LED module, this ceiling light creates a mesmerizing melting hot-blown glass effect when on and a mirror finish effect when off.

## DINING ROOM

NEW

The discreet design of the SENSE PRO acoustic luminaire, which is available in two sizes and various colors, makes this luminaire the ideal acoustic module for modern living spaces.

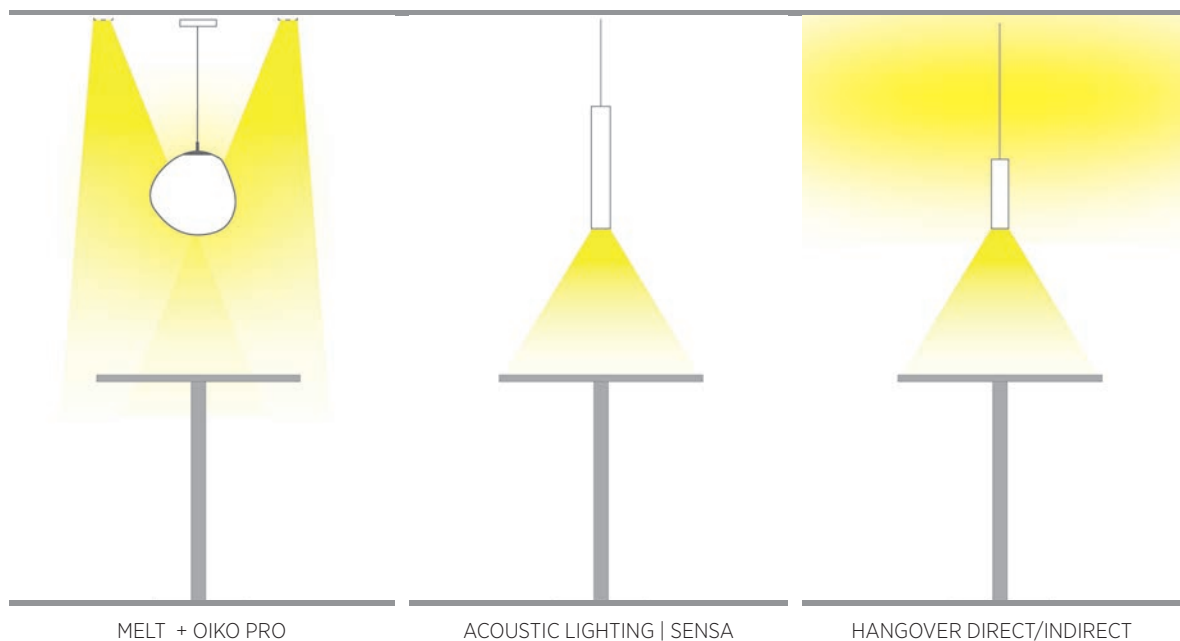

## DINING ROOM LIGHTING

The dining table occupies a central point in many living rooms. This serves not only for eating, but must also be equipped for playing, for conversations or for working and learning. Due to these different uses throughout the day, flexible lighting that fits the changing conditions must be ensured.

The lighting should be adjusted to the size of the table and possibly, in the case of extendable tables, be adaptable to the larger number of people. The lighting must ensure that the table is optimally and sufficiently illuminated without glaring the people sitting around it.

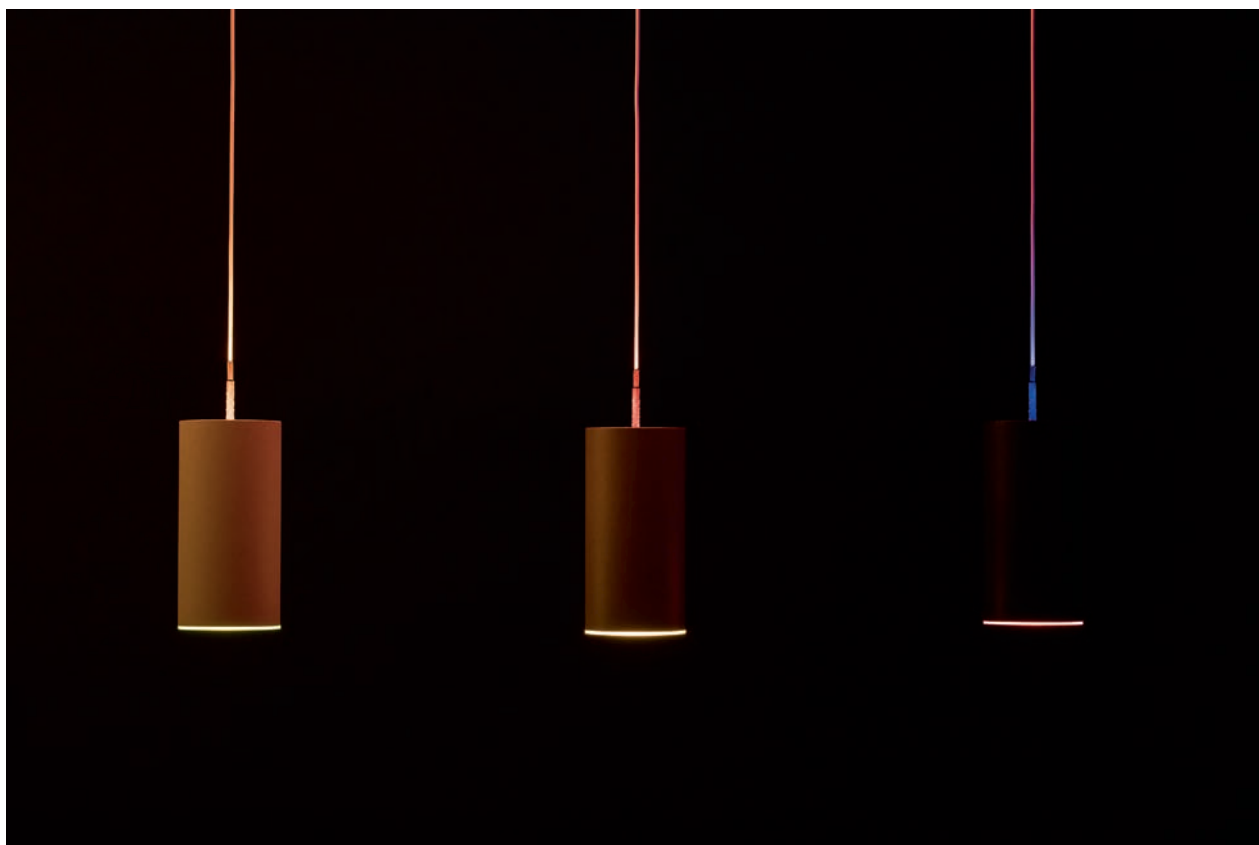

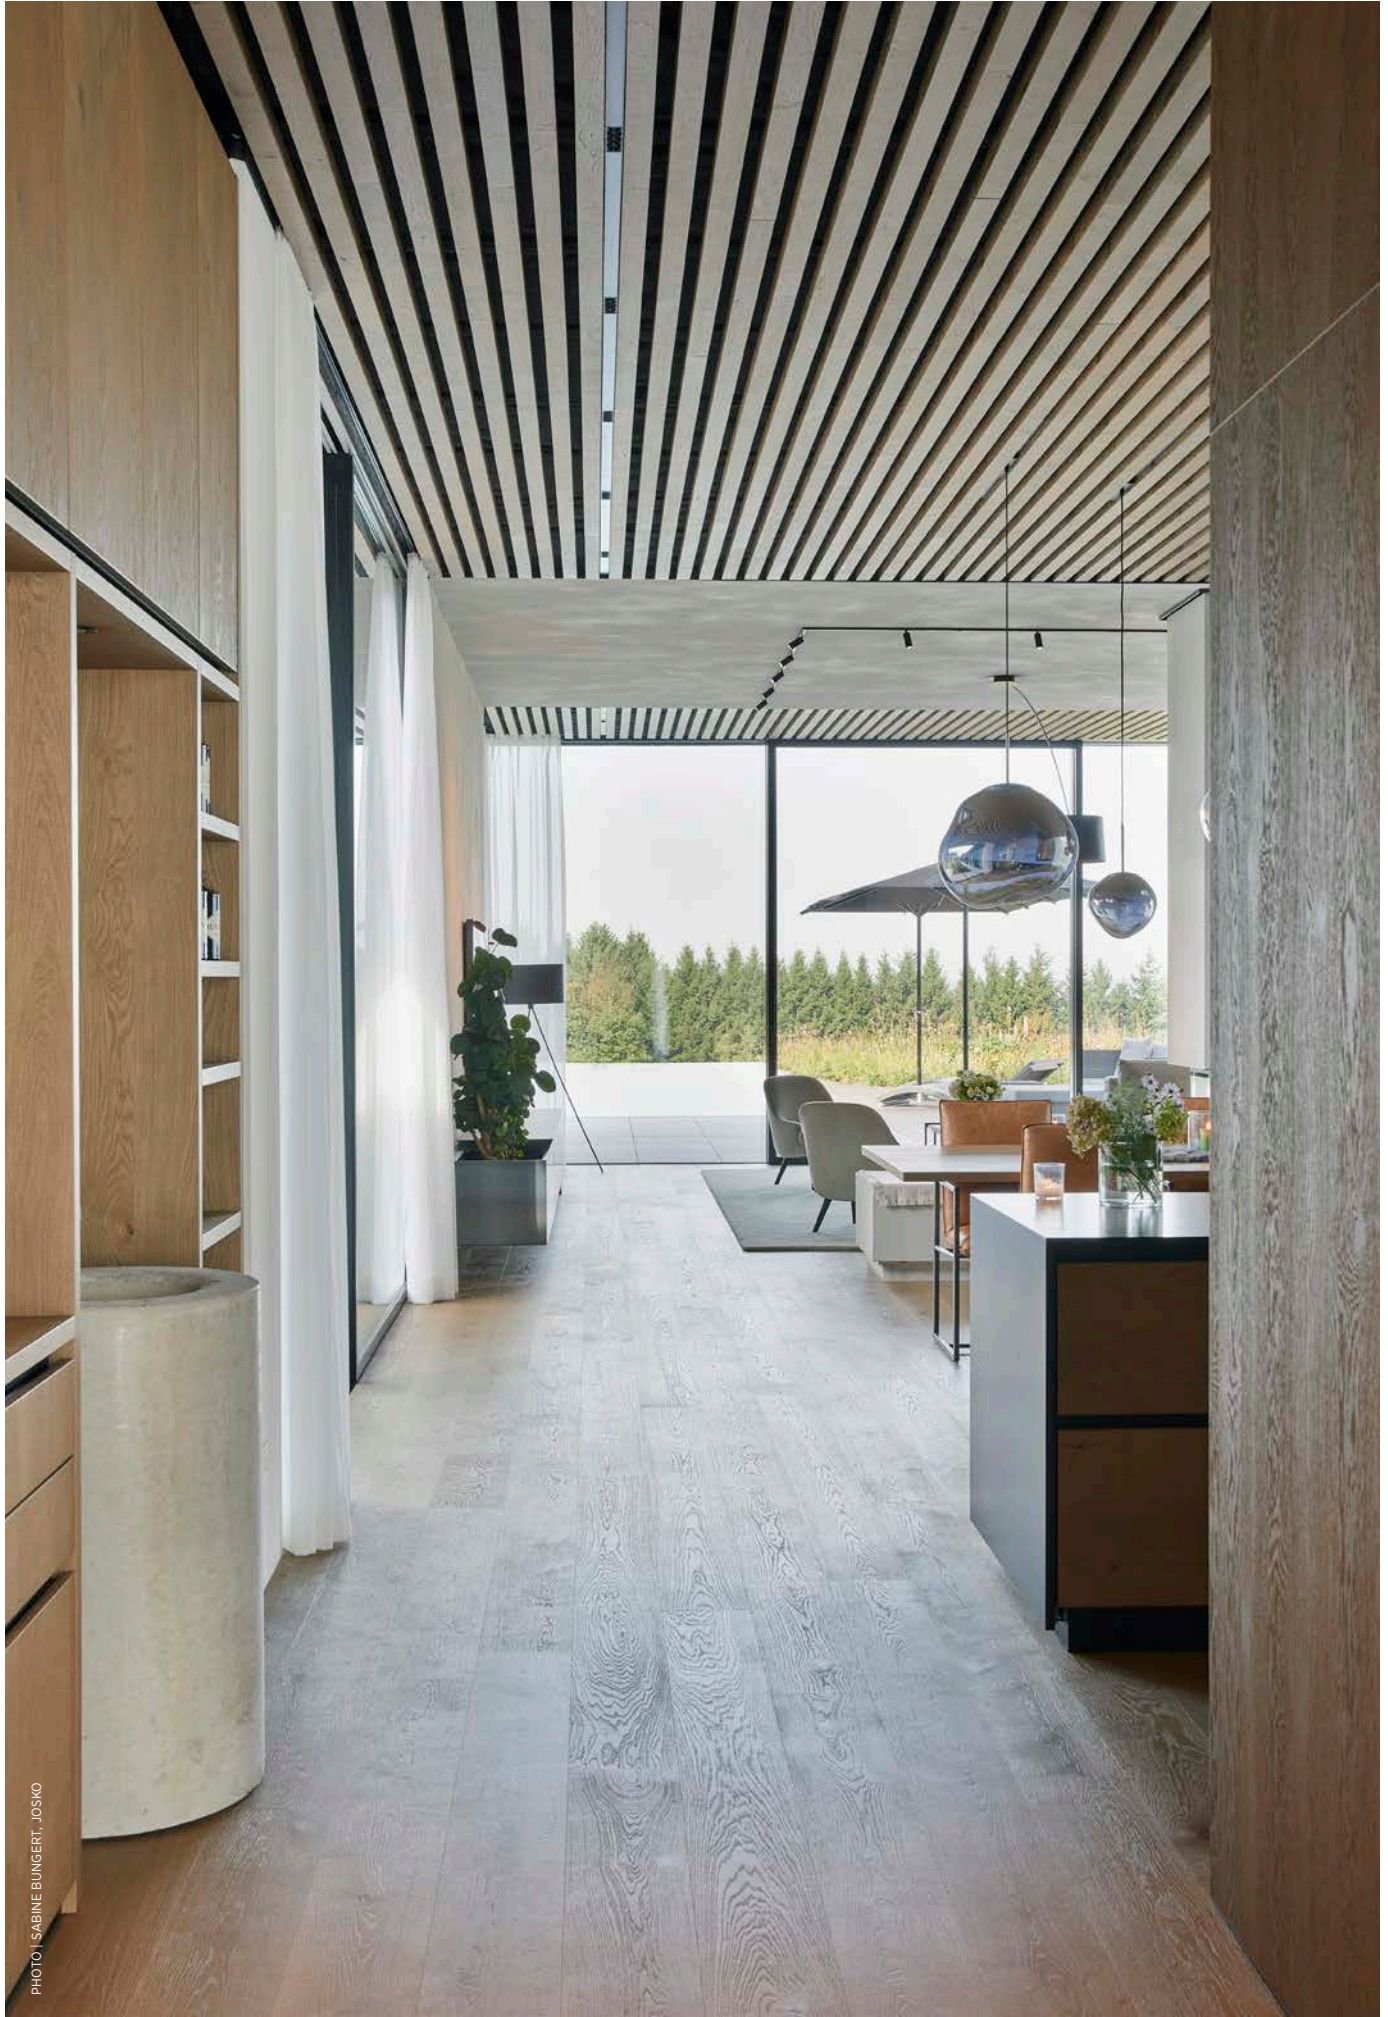

DINING ROOM

## MINIMAL TRACK

MINIMAL TRACK offers a wide variety of inserts, from pendant luminaires over decorative elements to minimalistic spotlights. The ultra-compact design of the IMAGINE MICRO spotlight makes the sophisticated technology almost invisible, leaving only elegant lines that integrate perfectly into the interior design.

PHOTO | SABINE BUNBERT, JOSKO

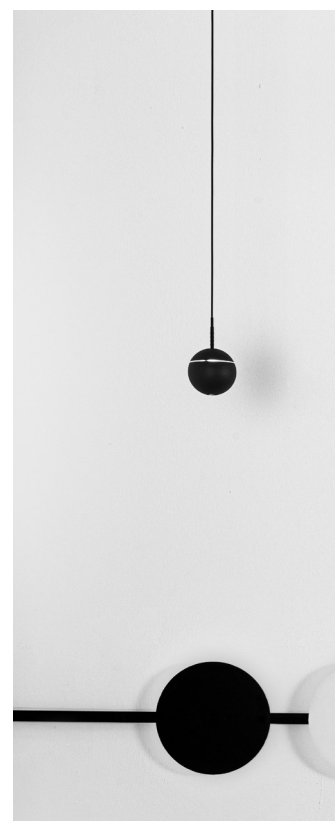

The suspended luminaire MELT, designed by Tom Dixon is available in different sizes and looks and will be an extraordinary highlight in any room.

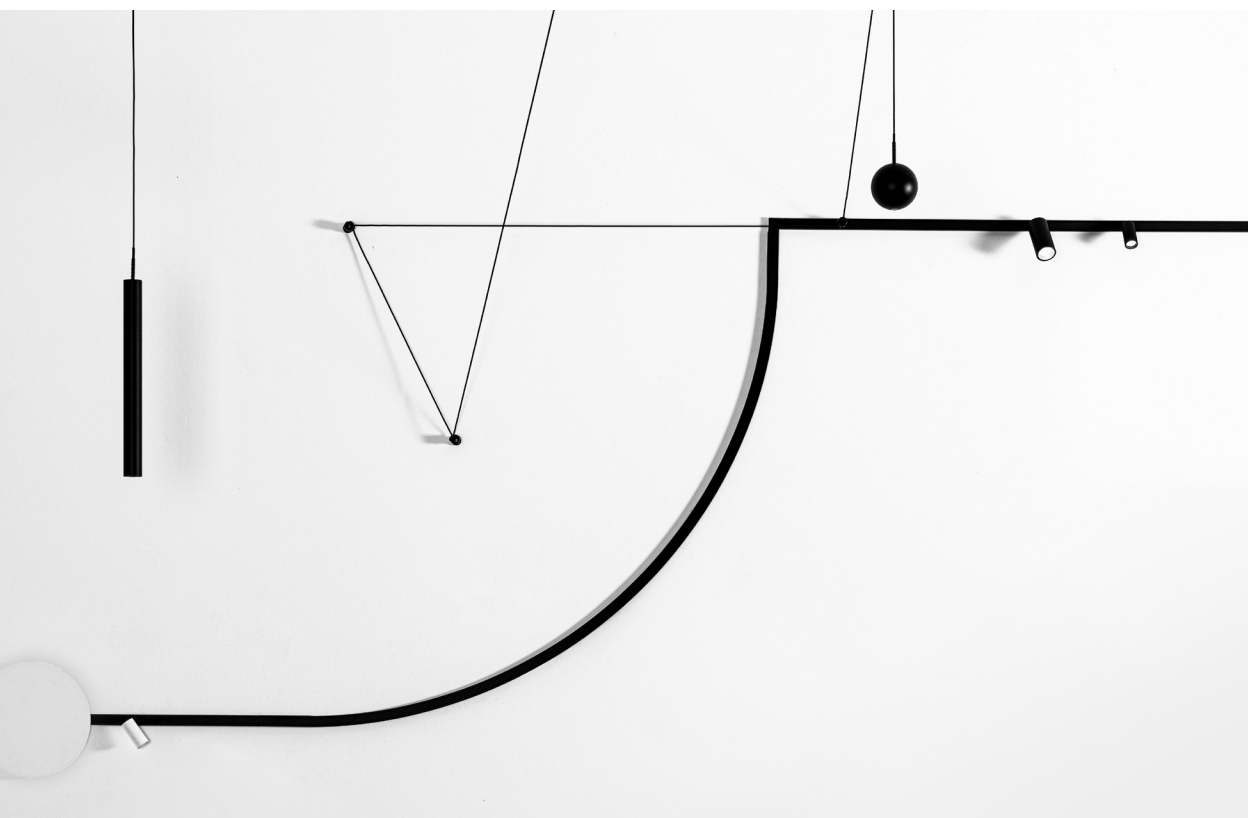

## MINIMAL TRACK PLAYFUL MINIMALISM

Many different inserts, optional components and colored accessories allow unlimited scope for individualized design concepts. MINIMAL TRACK is not only suitable for creating the perfect lighting atmosphere, but also adds individuality and exceptionality to any residential building.

With the choice of a coordinated beam angle a wide range of lighting moods can be created and with almost endless color combinations designers have exceptional freedom of design.

## PERFECT LIGHTING IN THE KITCHEN

Kitchen lighting can prevent injuries, simplify work and create a cozy atmosphere. Good illumination of the entire kitchen, preferably 500 lux or more, is necessary to provide the basic brightness needed and also to meet all requirements from a functional point of view.

## ART & OBJECT ILLUMINATION

In order to stage pictures and objects in the best possible way, they must be individually illuminated. Optimal lighting prevents damage to the artworks while presenting the exhibits aesthetically and purely without any perception of the light setting.

IMAGINE MICRO MICRODOT is available as surface and trimless versions and also offers different ceiling cutout diameters to provide the best conditions for each project.

## SLEEPING ROOM

HANGOVER MICRO-DOT

### THE PERFECT LIGHT FOR BEDROOM

The bedroom is used for rest and regeneration and should therefore provide a soothing and relaxing atmosphere. However, the lighting in this room, in addition to the atmosphere, must also meet some functional aspects. Light that provides good visual conditions for reading in the evening without illuminating the entire room or also ensuring optimal illumination of the closet are to be considered in the lighting concept.

The iconic spherical luminaire SNOOKER is a real eye catcher on its own or grouped in multiples as a light installation. The unique MICRO-DOT lens provides pure light with optimum glare control. The integrated lens optics allow beam angles of 32° and 58° while offering a maximum effect with a minimal light emission opening. The HANGOVER PLUG suspended spotlights are available with a rope length of 2 or 4 meters and can be manually shortened or lengthened by rolling into the canopy.

SNOOKER SHINE

BATHROOM

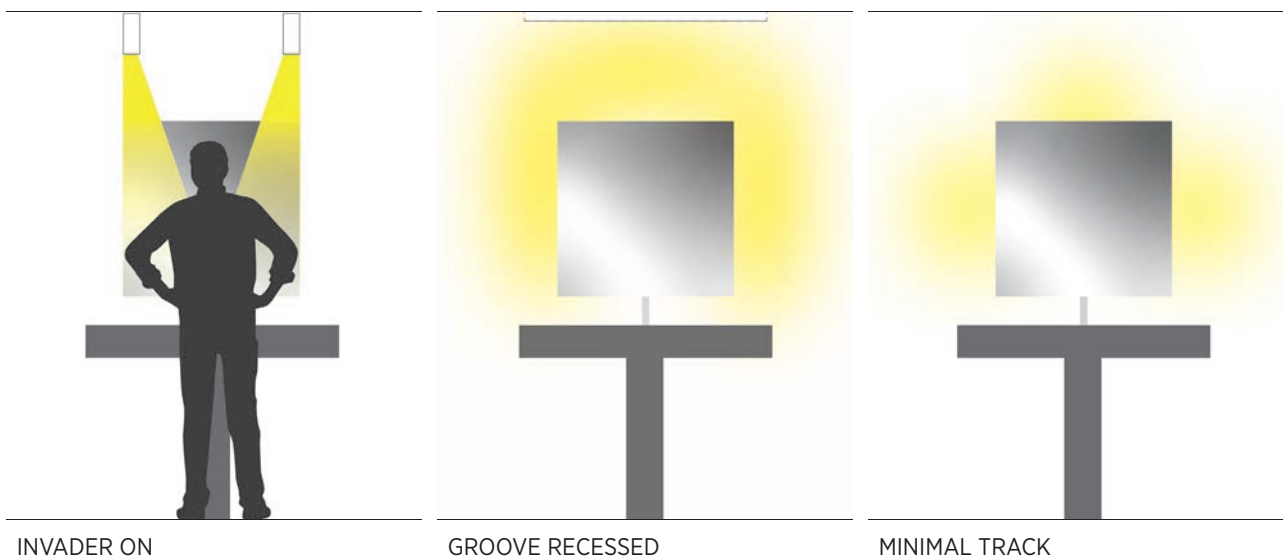

## THE PERFECT LIGHT FOR BATHROOM

The lighting concept for bathrooms must be based primarily on a bright general lighting. In addition, accentuating light creates an atmosphere that activates in the morning and promotes relaxation in the evening. Bright mirror lighting that illuminates the face with minimal shadows is part of the basic equipment in the bathroom. This room is also a place where special requirements in case of the construction and protection class must be observed in order to meet all safety requirements.

## IP44 | IP54

Safety plays a major role in the bathroom, which must also be considered in the lighting concept. Individual luminaires are also available in a protected version for covered outdoor areas and damp rooms. Thanks to their special design, the IP44 or IP54-compliant luminaires are protected against the ingress of dirt and water from all sides.

## ACTIVATING LIGHTING IN HOME OFFICE

Workplaces are moving more and more into the private sphere, so even when planning a house or apartment, consideration must be given to a separate room or area that guarantees optimal working conditions. Especially in the private sphere, it is important that this area is highly functional and aesthetic in order to enhance motivation and at the same time not to deprive the private environment of the atmosphere to relax.

In today's interconnected world, office spaces are becoming increasingly complex and multi-functional. The HYPRO-F is the perfect choice for flexible and constantly changing rooms. With its unique technology, this luminaire fulfills all different lighting requirements in order to always offer the appropriate lighting configuration.

# PROLICHT MAKES A DIFFERENCE

If you promise your demanding clients bespoke, high-tech, quality products, you can't have them made just anywhere. We manufacture our products where the best trained technicians, engineers and designers find themselves at home: right in the middle of the Tyrolean Alps.

At the end of the day, it is their skill that makes a difference. And it is their expertise that has made PROLICHT one of the world's most successful premium manufacturers of architectural lighting concepts. Sustainably produced and custom made in the centre of Europe, in the heart of the Tyrolean Alps.

WWW.PROLICHT.AT

# CONFIGURATION MAKES A DIFFERENCE

Luminaires can play an important role in your room design, which means that you need to have unlimited configurability. And that's what we at PROLICHT can give you. With all our lighting solutions.

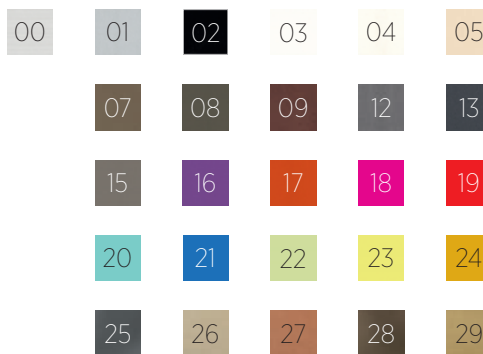

Try it out and see for yourself what it means to create your own, tailor-made product from millions of possible combinations - with the help of our unique 3D configurator.

## MAKE IT YOURS!

We are driven by the constant challenge of finding new solutions to meet special requirements. Our experience and flexible processes offer us a decisive advantage when doing so.

**Barbara | Custom Solutions Development, PROLICHT headquarters**

## INDIVIDUALITY THAT MAKES THE DIFFERENCE

We are passionate about perfectly staging unique projects. Thanks to our myriad of standard configuration options, we provide the creative design freedom required to implement even complex concepts.

However, we are also aware that even with the greatest of customization options, some requirements still cannot be met. That is why we also offer custom solutions. These are specially developed by our custom-design experts in consultation with the clients and in line with their precise wishes.

Individual shapes, sizes, or lighting technology are part of our everyday work. We aim to plan and develop the best possible lighting for every purpose so that our partners can optimally implement their projects. For this to be possible, we have to precisely know and understand our customers and their wishes.

Long-term partnerships and straightforward communication make collaborating with PROLICHT efficient and conducive. We take time for our customers and their projects, which we support right from the idea stage through to project completion if desired.

With tailor-made solutions unlike any standard ones, impressive flexibility, and clear customer proximity, we are the ideal partner for creative lighting designs.
